Tokenizer

Learn about language model tokenization

OpenAI's large language models process text using **tokens**, which are common sequences of characters found in a set of text. The models learn to understand the statistical relationships between these tokens, and excel at producing the next token in a sequence of tokens. Learn more.

You can use the tool below to understand how a piece of text might be tokenized by a language model, and the total count of tokens in that piece of text.

GPT-5.x & O1/3 GPT-4 & GPT-3.5 (legacy) GPT-3 (legacy)

João Pedro Magalhães Walverde
"A engenharia de prompt otimiza LLMs"
"O gato come", "coloque 3 palavras mais provaveis para completar"

Clear Show example

Tokens 37

Characters 134

```
João Pedro Magalhães Walverde
"A engenharia de prompt otimiza LLMs"
"O gato come", "coloque 3 palavras mais provaveis para completar"
```

Text Token IDs

A helpful rule of thumb is that one token generally corresponds to ~4 characters of text for common English text. This translates to roughly ¾ of a word (so 100 tokens ~= 75 words).
